Abstract

PURPOSE: To obtain a glucose preparation useful as transfusion or peritoneal dialysis fluid free from formation of 3-deoxyglucosone by adding cystelne in thermal sterilization stage. CONSTITUTION: Glucose or a glucose-containing agent is incorporated with 0.7-10% (especially 5-7%) cysteine based on the glucose, adjusted to pH 2-8 (preferably 2.5-6) and subjected to high-pressure steam sterilization to obtain a glucose preparation free from 3-deoxyglucosone which is a decomposition product of glucose. Since the preparation is free from 3-deoxyglucosone, it gives a transfusion free from the danger of phlebitis and thrombophlebitis and a peritoneal dialysis fluid capable of keeping the dialyzing effect over a long period.
